WEB DESIGN & DEVELOPEMENT

A collection of related network web resources makes a website and it has web pages and multimedia content. A website is known by a common domain name and published on at least one web server. One can access a website via a public Internet Protocol (IP) network, like the internet or a private Local Area Network (LAN), by a uniform resource locator that identifies the site. Examples of web are Wikipedia, Google and Amazon.

LOGOS

In developing the logos, businesses give their name and description and then we give our style-fonts, icons and colors. Then as per the selected style, we will develop some logos to choose from. From these entire logos, one is selected and customized. Then this logo is available for our customer.
