Address: **E-34, EKTA APARTMENT, Saket, Near Opposite Malviya Nagar Metro Station, N**

Price: **1,000.00 ?**

The Life-Saving Benefits of PEP Treatment for HIV Exposure: Post-Exposure Prophylaxis (PEP) is a lifesaving treatment designed to prevent HIV infection after potential exposure to the virus. Administered within 72 hours of exposure, PEP involves taking antiretroviral drugs for 28 days, working to block the virus from taking hold in the body. For individuals at risk of contracting HIV, PEP treatment is a powerful tool in preventing the spread of the virus.

In cities like Delhi, PEP treatment for HIV is widely available, providing a vital safety net for those who may have been exposed to the virus. The benefits of PEP treatment are vast, ranging from its high effectiveness to its accessibility in urgent situations. Here's an in-depth look at the key benefits of PEP treatment.

1. Immediate Protection After HIV Exposure

One of the primary benefits of PEP is its ability to provide immediate protection after a possible exposure to HIV. Whether the exposure occurred through unprotected sex, needle-sharing, or occupational exposure, PEP treatment in Delhi offers an urgent response. Administering PEP as soon as possible—preferably within hours of exposure—significantly increases the chances of preventing the virus from establishing itself in the body.

The 72-hour window is crucial. Individuals must seek HIV exposure treatment in Delhi or
